Online Bus Pass System

S. Pradhiba, D. SathiyaPriya, P. Vasantha Kumari and R. Rajkumar

Abstract---The project entitled “Online Bus Pass Registration / Renewal” is developed using Active Server Page.Net as Front end and MS SQL Server as back end. Bus pass registration is useful for passengers who are facing problems with the current manual work of bus pass registration and renewal. His/her renewal or registration can be done through credit card. In the manual system the user has to go on particular date and time if they fail then the renewal cannot be done. This online bus pass registration application will help candidates to save their time and renewal bus pass without standing in a line for hours near counters. Initially use needs to register with the application by submitting their details through online. The administrator will verify the candidate details and if they are satisfied they will approve bus pass. The candidate can login with their username and password and renewal is performed. The renewal process is carried by paying the money using the credit card. The candidate can give their valuable feedback for further enhancement of this project.

I. INTRODUCTION

This project is created to provide “safe, reliable, saving, efficient and affordable” services for user. This idea would help the user in a better way. As per the previous system the user had to do each and every process manually, but this system helps user to make the work bit faster. The user can then take print out of this bus pass from their mail id and use them. The bus pass will be differ for different types of users. In this bus pass, all the required details such as candidate name, address, date of birth, mail id, name of the school(government/private), validity period, amount paid (free for government school students) and photo copy of the candidate are provided. Instead of school details, working organization details will be provided in employees bus pass. The renewal process can be done either monthly or yearly as per user wish. Based on that renewal period amount will be deducted.

II. LITERATURE SURVEY

Sadaf Sheikh, Gayatri Shinde, Mayuri Potghan, Tazeen Sheikh proposed application which will be used for the process of booking a ticket for travel through local trains or metros. Snehal Kalbhor, Ashwini Mangulkar, Mrs. Snehal Kulkarni proposed the various techniques for buying metro tickets or local railway tickets through their Smartphone application and introduced ticket checker.

Tushar Dongare, Akshay Babar provided various techniques for buying tickets through their smartphone application through GPS facility of android mobile so that passenger can easily get the list of station and he can easily buy tickets.

Ramadevi, K. Murugan, S. Bharath. S proposed a mobile ticket application developed for android in which user procure ticket in future. Neha sandikar, rane dipti, sachi panday proposed the various techniques for buying metro tickets or local railway tickets through their Smartphone application and introduced ticket checker.

Manmohan Swarup, Chanchal Sonkar, Vijendra Singh proposed a system through which railway ticket booking is done through website and also from multimedia phones.

Wan Husani Wan Hussin, Paul Coulton proposed a system in which More consumer are expected to engage in mobile commerce transaction, wider adoption of mobile.

III. EXISTING SYSTEM

In the existing system bus pass registration and renewal process are carried out manually. The person has to visit the counter and have to submit the details and then they have to wait for approval. For each and every process there is time limit specified if the person fails to go on time then all the transactions will be cancelled. In this existing system was used to bus details maintain through file. And after bus information are stored to computerize. The Project Metrics has to enter all the details of project, documents, and tasks. And, also the maintenance team information and also efforts estimation. For this purpose the organization maintain the size of the document; source code and update the information about team member’s details manually. Which is much of time consuming process and more importantly it is error prone. At present system bus pass collect from depot very rare one. User can facing lot of problems

Disadvantages

• It is time consuming
• It consumes lot of manpower to better results
• It lacks of data security
• Retrieval of data takes lot of time
• Percentage of accuracy is less
• Reports take time to produce

IV. PROPOSED SYSTEM

The proposed system overcomes the drawbacks in the existing system. In the proposed system user register their
details through online and get their unique username and password for further processing. The bus pass will be differ for different types of users. In this bus pass, all the required details such as candidate name, address, date of birth, mail id, name of the school (government/private), validity period, amount paid (free for government school students) and photo copy of the candidate are provided. Instead of school details, working organization details will be provided in employees bus pass. The renewal process can be done monthly as per user wish. Based on that renewal period amount will be deducted.

A. Features of the Proposed System
   - To make accuracy and efficient calculations. To provide proper information briefly
   - To provide huge maintenance of records
   - Flexibility of transactions can be completed in time
   - Easily bus pass apply through online.

ARCHITECTURE OF THE PROPOSED SYSTEM:

This process supports existing infrastructure requirements and provides specific recommendations for hardware and network solutions based on existing and projected user needs. Application requirements, data resources, and people within an organization are all important in determining the optimum hardware solution. It is represented using a three tier architecture that comprises of user interface, process management and Database Management System (DBMS). It shows the components of the system, the services they provide and the way they communicate to bring about the system’s functionality.

V. METHODOLOGY
A. Description of Proposed System:
The System is very easy to implement. The system has the following features:
   - It will ensure data accuracy.
   - All the records will be efficiently maintained by SQL Database.
   - The bus pass registration is necessary for the system.
   - Only minimum time needed for the various processing.

B. User Activities:
The most common activities carried out by user are illustrated below
   - The user can login using username and password.
   - The user can sign up/do registration with the system. The registered user can login to the proposed system.
   - The user can register their bus pass details.
   - The user can also do renewal process of the system.
   - The user can print the bus pass report.

C. Database Activities:
   - The depot officer/Database Scheduler will verify all the registered user, and allow them to login the system.
   - The administrator can acknowledge to verify, the user made on the system.

D. System Requirement:
The requirement definition is concerned with the analysis of the existing system with the aim of determining and structuring the requirement of the proposed system. It is achieved with the aid of user requirement.

VI. PRESENTATION OF THE APPLICATION INTERFACE (MODULES)
The presentation is based on the interface of the system and the outputs from the back end and the application interfaces consist of various windows that enable Different categories of users to interact with the system. This includes some of the user’s details forms and their respective outputs.

HomePageInterface:
The home page of the system shows various menus of the application. It also shows login link for already existing users at the top of the application and a link for a new user to register quickly. The number of the menu depends on the role of the user. The forms were developed using Asp.net and SQL Database. Different forms were developed to enable the users perform the following tasks:

User’s login, Register the user by capturing personal information, Username and password is given in the login page, if the user is new then they will register their personal details.

A. User Register Page:
The user registration process of this project consists of five different user data’s. The fields are like First Name, Last Name, Gender, Email-ID, User Name, Password and Mobile Number. This fields must be given at the time of registration. This form is succeeded only the user give the valid information, otherwise the registration process will not be done.

This user information should be stored in our database, which make the login process is easy one. If the registered user have their own username and password, that will also be stored in the database.
B. Register Form Detail from Database:

C. User Login Page:
Once the user successfully registers, then the particular user can directly access the Login page.

D. Bus Pass Registration:
This module is used to fill their details like name, fathers name, mail id, date of birth, contact number, photo (soft copy), aadhar card number, city and they used to give the path. These are required details and after filling the details user wants to give submit. Now the bus pass registration will be done.

VII. Renewal
In this module, the user enters into the renewal form for renewal bus pass. The user has to give the month of renewal, user id and the necessary details. For making the payment through online user gives their credit card number and pin number for amount transaction. Once the process is completed the user bus pass will be renewed through this application.

VIII. Technical Index System
In this paper, the following aspects of the ticketing system are used to establish the
1) Reliability:
The system may failed for two reasons: The first one is hardware failure and the second one is the software error. The operator cannot handle a hardware failure and it has to be repaired by the maintenance department.
2) Stability:
Software error rate (ratio of times of software error per month and the number of terminals) is used to measure the stability.
3) Energy Conservation:
To measure it by the ratio of the power consumption of the entire system and the number of tickets sales.

4) Running Security:
   It is measured by the ratio of security of the database and the total times of the equipment failures and terminal of system.

5) Availability:
   Calculating the ratio of rated system working time and actual time to measure the system’s availability.

IX. ADVANTAGES
   - Passengers don’t have to waiting time in queue.
   - It’s mostly used for most of the employers.
   - Information is accurate.
   - It is a fast process.

X. CONCLUSION

Bus pass Registration and Renewal System Project is a real time project which is useful for the students who are facing problems with the current manual work of bus pass Registration and renewal. It also increases the validity period, frequently Warns to the student before completion of his validity period by website. His / Her Renewal or Registration can be done using a voucher or even by a credit card. This online bus pass registration application will help students save their time and renewal bus passes without standing in a line for hours near counters. Initially students need to register with the application by submitting details of photo, address proof, and required details and submit through online. They will verify your details and if they are satisfied they will approve bus pass. You can even renewal using credit card or other wire transfer methods.
